KUIP - Kit for a User Interface Package

The `KUIP` package is part of `PAW` (Q121) (Physics Analysis Workstation), but can be used independently. `KUIP` is an interface program for any application based on interactive input of commands. From the application it is seen as a slave which supplies the next command with its associated parameters. It takes care of program input in various (e.g., graphics or menu) forms and performs preliminary checking on command syntax and parameters.

Structure:

`SUBROUTINE` subprograms

Usage:

See **Long Write-up**.
