Print Large Characters

`VIZPRI` prints one line of large characters to make banner pages. A large line occupies 12 text lines; each large character is 12 columns wide with 2 blank columns to separate.

Structure:

`SUBROUTINE` subprogram
User Entry Names: `VIZPRI`
Files Referenced: Parameter

Usage:

```
CALL VIZPRI(LUN,CHTEXT)
```

with:

`LUN` Fortran logical unit number for printing, if zero: use 'standard output'.

`CHTEXT` (`CHARACTER`) text to be printed.

Examples:

```
CALL VIZPRI(0,'e=mc2')
```

gives:

```
eeeeeeeeeeee                mm        mm   cccccccccc    2222222222
eeeeeeeeeeee                mmm      mmm  cccccccccccc  222222222222
ee                          mmmm    mmmm  cc        cc  22        22
ee             ==========   mm mm  mm mm  cc                      22
ee             ==========   mm  mmmm  mm  cc                      22
eeeeeeee                    mm   mm   mm  cc                     22
eeeeeeee                    mm        mm  cc                   22
ee             ==========   mm        mm  cc                 22
ee             ==========   mm        mm  cc               22
ee                          mm        mm  cc        cc   22
eeeeeeeeeeee                mm        mm  cccccccccccc  222222222222
eeeeeeeeeeee                mm        mm   cccccccccc   222222222222
```
