Revised:

COMIS - Compilation and Interpretation System

The `COMIS` package is part of `PAW` (Q121) (Physics Analysis Workstation), but can be used independently. It is a Fortran interpreter with which the user can interactively define, edit and execute any Fortran routines without recompiling and relinking. A small user interface system is part of `COMIS` and an interface with the local editor is also provided.

Structure:

`SUBROUTINE` subprograms

Usage:

See **Long Write-up**.
